TC 1700

2. (Amended) A method of fabricating an optical fiber preform including an operation of  
glazing the outside surface of said preform using a plasma torch as recited in claim 1 for  
localized heating of the preform, in which method a flow of gas between the plasma and said  
preform in the area of the outside surface of said preform on which said plasma impinges reduces  
the power of said plasma in said area.
